HJC

FOR THE MOMENT

HJC SPORTS is about the moment, finding one's self again, in a leap of escape from artificial boundaries and into self-restoration, self-acceptance, balance and peace and in a flow of harmony with all that surrounds us.

For the moment, we are aware of our sense of self in the presence and in spontaneous moments. The value of life is not in the blurry, mindless, cycles of repetition; the value of life starts from awareness of the soul in the moment. When you are truly aware of your feelings in the moment, with appreciation, you are truly alive.

Let's ride...

FURIOUS FLAME VENT

FOR RIDERS SINCE 1971

HJC has been developing and manufacturing helmets since 1971. Highly praised in the field of motorcycle helmets, HJC is recognized for its long history of helmet production involving advanced material construction, strength and lightweight performance.

OVER 50 YEARS OF CONTINUOUS CHALLENGES

In commitment to excellence and advancement in helmet technology, HJC has mastered the art of making helmets to premium standards. The brand has distribution in over 80 different countries worldwide with various helmet categories representing 20% of the European motorcycle helmet market.

With lessons learned from the time it took to be successful, HJC is now moving forward once again with the aim of becoming the world's firstclass helmet company by developing next level cycling helmets with strategic choices made in the creation and the introduction of new construction methods.

SELFIT PRO™ is the culmination of HJC's five decades of expertise in helmet technology, developed in collaboration with professional riders to provide the ultimate performance and fit.

JUST PUT IT ON AND ENJOY THE RIDE

Retaining the advantages of the existing automatic fitting system of SELFIT™, this most recent technology allows for additional micro-fitting adjustments through a dial.

SELFIT PRO™ empowers riders to achieve the ultimate performance by making critical fitting adjustments in real-time.

SELFIT PRO™ is crafted for the most demanding of riders who seek only the best in helmet technology.

The advanced GEL material inside the **SLID™** liner has flowable properties that disperse impact, ensuring maximum safety and protection for riders.

MINIMIZING ROTATION IMPACT FORCES AND ENERGY TO THE BRAIN

SLID™ is the apex of safety technology in cycling helmets, an innovative feature created by HJC that incorporates a special GEL material inside the helmet liner.

This technology has been designed to reduce the amount of energy delivered to the brain in the event of an impact, providing a rotating function that minimizes the rotational impact energy on the brain.

Fitting and comfort are an integral part of HJC helmets. The R&D department has developed a revolutionary feature patented by HJC for enhanced riding comfort.

FIND YOUR COOLPATH

COOLPATH™ is a unique technology patented by HJC. Replacing the inner padding it allows the cool air to flow around your head and improves your comfort during the ride. The cool air flow and the lightness of the helmet enhance the fitting and provide an excellent riding experience.

STANDOUT AIR CIRCULATION PERFORMANCE

APPLICABLE MODELS

**IBEX3
FURION 3
BELLUS
VALECO2**

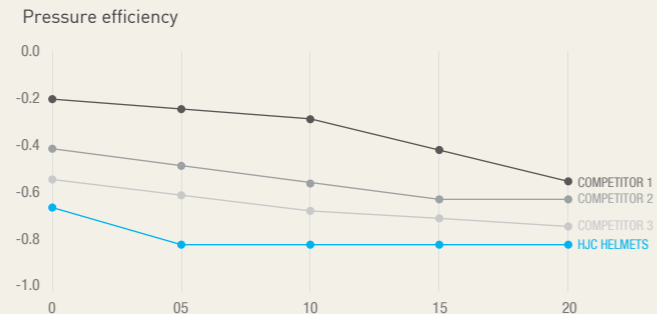

In order to achieve maximum ventilation, a technical adaptation of Bernoulli's principle is applied to HJC's aerodynamically enhanced models. In motion, the rate of surface flow generally increases as it progress towards the rear of the helmet.

Through pressure differences, cool air from the frontal intake is extracted through the rear vent for internal heat dissipation, giving the cyclist optimum ventilation while riding.

SAVE WATTS WITH HJC HELMETS

From all perspectives, while riding, test results show that HJC probably offers the best ventilated semi-aero helmet on the market.

ADVANCED EXHAUST VENTILATION PERFORMANCE

Coming from MotoGP race-helmet design experience, HJC designers and engineers have become experts in aerodynamics and wind ventilated helmets. Aero helmets, as the word implies, are more aerodynamic than the conventional racing bike helmet, but with compromised ventilation performance.

TECHNICAL FEATURES

SELFIT PRO™

SELFIT PRO™ is a self adjustment technology retaining the advantages of the existing automatic fitting system of SELFIT™, this most recent technology allows for additional micro-fitting adjustments through a dial. SELFIT PRO™ empowers riders to achieve the ultimate performance by making critical fitting adjustments in real-time. 5 snap fitting positions provide consistent fitting and comfort for all.

COOLPATH™

COOLPATH™ is a new technology replacing the inner padding, allowing the cool air to flow around your head and improving your comfort during the ride. The cool air flow and the lightness of the helmet enhance the fitting and provide an excellent riding experience.

SLID™ Sliding Layer Impact Distribution

SLID™ is an innovative feature created by HJC that incorporates a special GEL material inside the helmet liner. Designed to reduce the amount of energy delivered to the brain in the event of an impact, this technology provides a rotating function that minimizes the rotational impact.

SELFIT™

SELFIT™ is an automatic self-adjusting fitting system which is a revolutionary technology in bicycle helmet fitting. Once the helmet fit is set for your head it doesn't require further adjustment, even when your head is moving during the ride. The SELFIT™ system automatically adjusts the gap and provides consistent fitting and comfort for your head. 5 snap fitting positions provide consistent fitting and comfort for all.

Internal Reinforcement Structure

The helmets are reinforced with an internal frame integrated into the EPS. The skeletal frame not only holds the helmet in one piece, but also makes it stronger and more resistant to protect your head in the event of a collision.

In-Mold Construction

In-mold is a method consisting in bonding the EPS together with the outer polycarbonate shell for greater structural strength. This improves the rider's protection by providing a compact reinforcement and gives the product a perfect finish.

Aerodynamic Design

Coming from MotoGP race-helmet design experience, HJC designers and engineers have become experts in aerodynamics and wind ventilated helmets. Aero helmets, as the word implies, are more aerodynamic than the conventional racing bike helmet, but with compromised ventilation performance. With HJC Helmets, this compromise is very much reduced. HJC offers probably the best ventilated semi-aero helmet on the market.... Save Watts with HJC Helmets!

Wind Tunnel Tested

HJC helmets are tested in the laboratory as well as in "real-life" to meet the highest quality standards. HJC is one of the very few helmet companies equipped with its own state-of-the-art wind tunnel laboratory to test aerodynamics, ventilation, noise and more. The HJC wind tunnel test lab measures the air forces in a variety of riding conditions to improve helmet performance.

Venturi Dynamics

In order to achieve maximum ventilation, a technical adaptation of Bernoulli's principle is applied to HJC's aerodynamically enhanced models. In motion, the rate of surface flow generally increases as it progresses towards the rear of the helmet. Through pressure differences, cool air from the frontal intake is extracted through the rear vent for internal heat dissipation, giving the cyclist optimum ventilation and perfect air flow while riding.

Hybrid shell construction

This technology is specially developed in double layer of shells to reinforce helmet strength and riders safety. It also allows stylish design through various color combinations.

Advanced Air Channel System

A certain amount of air passes through the front air-intake port, then circulates inside the helmet and finally exits through the exhaust port. The internal airflow is then increased to cool the head and evacuate the heat.

Feather Light

HJC bicycle helmets are designed and engineered through precise measures to have the lightest weight possible. Density, placement, shapes and materials all play a part in weight optimization.

Visor

Aero Time Trial and Triathlon Helmets are equipped with a mirror visor to improve the riders' comfort and visibility, HJC's aero helmets are engineered in order to have the same aerodynamic performances with and without a visor.

X-STATIC® & IONIC®

X-STATIC® is made by permanently bonding 99.9% metallic silver to the surface of a fiber. It is not a nanotechnology, or a complex chemical formula; X-STATIC® is simply silver. The permanent performance of X-STATIC® keeps apparels smelling fresher for longer, even after multiple wear cycles between washings. IONIC® is the successor of X-STATIC® and has the same performance.

HJC

The professional cycling serves as an exceptional platform to show HJC's unparalleled expertise in helmet development, technical performance, and design. It acts as a dynamic laboratory where we consistently push the boundaries of technology and innovation. This journey of continuous research and improvement is propelled by invaluable feedback from elite cyclists who entrust HJC Sports to provide them with cutting-edge helmet technology.
